WELCOME TO THE INTERNET OF CAREERS®

With the economic contraction emerging from Covid-19 health challenge, increasing prices continuing to squeeze living standards worldwide and the war in the Ukraine, businesses will likely face a prolonged period of economic pressure. Coupled with the effects of the Fourth Industrial Revolution we've seen disruption across global labor markets: skills shortages, disconnected workforce, the shift toward contingent work and a growing gig economy. To win against these trends, banks will need to accelerate and elevate their employment game.

All bets are on innovations in education and human resources technology to tackle newer challenges, with increased demand for smart automation, AI and algorithmic matching to connect people with jobs and career development opportunities. Yet, most individuals and organizations still rely on costly, self-reported and unverified methods to exchange data about previous employment, professional achievements and educational certifications, all of which are key to employment efficiencies. The fragmented data exchange system is holding back the job market and preventing the mitigation of critical challenges facing humanity today.

Velocity Network™ is the world's network for verifiable and trusted career credentials, designed for the digital age. Driven and deployed by the largest vendors in education and workforce tech and governed by the nonprofit Velocity Network Foundation®, Velocity Network™ is an open, public, decentralized utility layer known as the **Internet of Careers®**.

The **Internet of Careers®** makes it possible for people to claim and manage immutable, trusted copies of their career and education credentials and choose with whom to share this information. At the same time, organizations can rely on verifiable applicant, candidate, student and employee information, seamlessly and effectively achieving significant reductions in the time and costs associated with talent processes, while reducing risk through decisions based on reliable data and supporting compliance in today's global labor market.

Join us, as we move to change the world of work.
